

Perfusion: CAD, Angina, ACS Concept & Prep-Work

Please review the reading assignments for the perfusion exemplars:

Lecture Day 7: Perfusion Concepts

Concept focus: blood flow *to the heart muscle* – supporting myocardial oxygenation and function.

Objectives:

By the end of this learning experience, the student will be able to:

1. **Describe** normal coronary circulation and the factors that affect myocardial oxygen supply and demand. (QSEN: Patient-Centered Care, Safety)
1. **Identify** assessment findings, diagnostic data, and clinical indicators associated with impaired coronary perfusion. (QSEN: Informatics, Safety)
1. **Differentiate** between chronic stable angina, unstable angina, and myocardial infarction based on pathophysiology and clinical presentation. (QSEN: Patient-Centered Care, Evidence-Based Practice, Safety)
1. **Apply** appropriate nursing interventions for patients experiencing acute and chronic alterations in coronary perfusion. (QSEN: Patient-Centered Care, Teamwork & Collaboration, Safety)
1. **Analyze** patient responses to treatment and early recognition of complications associated with acute coronary syndrome. (QSEN: Evidence-Based Practice, Safety)

Exemplars:

- Coronary Artery Disease (CAD)
- Chronic Stable Angina (CSA)
- Acute Coronary Syndrome (ACS)
- Unstable Angina
- Myocardial Infarction (MI)
